JUNGLE BOX

| | |
|----------------------------|---------------------------------------------|
| Jungle Box (per m2) | € 130 - 140* |
| Material | Recycled plastic |
| Sizes | 60 x 40 x 25cm |
| Total dry weight | 60kg |
| Total saturated weight | 130kg |
| Waterbuffering capacity | 70L |
| Plants | Perennials, small shrubs, wildflowermats |
| Planting plan situation | dependent |
| Waterbuffer | 3cm Argex |
| Substrate layer | 17cm Jungle Mix |
| Top layer | Funghi Mulch |
| Irrigation | Dripline (2x 1,6L/hr) |

**depending on quantity*

INSTALLATION

Modular placement

Jungle Boxes enable perennials and small shrubs to be placed on roofs at the weight of a sedum-mat. The crates are installed modularly on rubber spacers, to avoid direct contact with the surface below. On roofs, the outer rows of crates are connected to avoid movement caused by wind.

Crates with perennials require active irrigation, a clip for mounting 16mm dripline (30cm spacing, 2x 1,6L/hr) is incorporated in the crate.

The top layer of Funghi Mulch is required to keep the substrate in place. This wood-chip layer also infuses mycorrhizha into the substrate and limits evaporation of water on hot days. Moisture levels can be monitored through our Urban Mole humidity and temperature sensors (including dashboards).

Maintenance

Required maintenance depends on the planting plan and desired look: we recommend cutting back plants once a year before the start of the growth season and removing undesired weeds where needed.

In case of maintenance works or leakages on the roof / surface below, Jungle Boxes can easily be temporarily removed, stacked and placed back when maintenance is finished. When stacking crates, note that the weight of the crates may exceed the construction load capacity of the roof.
