

Jungle Blocks®

Rooftop & urban landscape solutions - 3D printed

The most enchanting rooftops are those that make you forget you are on a roof. Until you notice the stunning view on its surrounding.

Jungle Blocks® are designed to shape landscapes wherever conventional planting is not an option. With a storm-proof design and maximum saturated weight of 250kg per m², these lightweight and modular elements enable trees, shrubs, and perennials to be placed on roofs, balconies, streets and squares in no time.

Using 3D printing technology, Jungle Blocks are produced out of recycled post-consumer waste (polypropylene) and can be produced in almost any desired shape, size and colour, providing maximum design freedom to integrate intensive greenery on and around buildings. The base tree element can be either installed individually or connected to other Jungle Blocks, to shape a (rooftop) landscape. Benches are available to be mounted on the tree element for providing seating capacity.
